Subject Index

Acceleration of deswelling, 189
Acid–base interactions, 279
Acid–base properties, 21
Activated carbons, 75
Active carbons, 103
Adsorption, 123, 279
Adsorption kinetics, 65
Adsorption potential distribution, 103
Aggregation, 211
Aldehyde, 9
Alumina, 279
Amphiphiles, 123
Anchoring, chemical treatment, 75
Asphaltenes, 123
Axisymmetric drop shape analysis (ADSA), 265

CD-MUSIC model, 131
Chloride, 131
Colloidal dispersion, 183
Contact angle, 197
Contact angle hysteresis, 265
Creep, 203
Critical micelle concentration, 113
CTAB, 145

Deinking, 55
Drainage, 237
DTBN, 93
Dynamic adsorption, 29
Dynamic surface tension, 65, 225

Electrical resistance, 237
Electric charging, 183
Electrochemical characterizations, 247
Electrokinetic characterizations, 247
Electrokinetic investigation, 21
Electrolyte, 183
Electrorheological fluid, 203
Emulsion polymerization, 211
Emulsion stability, 257
Epoxy resin, 183

ESR, 93

Flocculation, 123
Foam, 237
Foam stability, 65, 225
Formamide, 155

Gamma-ray absorption, 237
Gemini cationic surfactants, 225
Gibbsite, 131
Gold nanoparticle, 155

Heterocoagulation, 211
HLB balance, 85
Hydrazide, 9
Hydrophobic surface, 189

Image processing, 197
Interface complex modulus, 65
Inverse gas chromatography, 279
Inverse microemulsion, 177
Ionic surfactant, 29
Isotherms, 163

Latex, 211
Lauroyl arginine methyl ester (LAM), 225
Lead, 131
Lewis acid site, 93
Lipidic bilayer, 1
Liposomes, 1
Liquid holdup, 237
Liquid penetration and surface swelling, 265
Liquid retention, 265

Magnetic, 145
Marine films, 163
Measurement, 197
Micelles, 1
Microchannel emulsification, 257
Microemulsion, 9, 145
Minimum critical micelle concentration, 113

PII: S0927-7757(01)00808-1

Monodisperse emulsion, 257

Nano-composite, 211
Nanoparticles, 145
Nitrogen hyperfine coupling data, 93
Nonionic surfactants, 85
Non-oxidised carbon black, 183
Nucleophilic addition, 9

Octamethylcyclotetrasiloxane (OMCTS), 265
Oxidation, 103

Palladium, 145
Phase behavior, 9
Phase transitions, 163
Phospholipids, 1
Plastic film, 55
PMMA, 279
Polarity, 85
Polyamidines, 21
Poly(amidoamine)dendrimer, 155
Poly(ethylene glycol), 9
Poly(*N*-isopropylacrylamide) gel, 189
Porous membranes, 247
Power-law exponent, 113
Printing, 55
Production of water in oil in water emulsion, 257

Reaction, 9
Recycling, 55
Retention volume, 279
Rheometer, 203
Riboflavin, 177

Shear modulus, 203
Silica, 279
Sodium bis-(2-ethylhexyl) sulfosuccinate (AOT), 177
Solid in oil in water pectin microcapsule, 257
Solution and surface properties, 225
Stability, 123
Supercritical carbon dioxide, 177
Surface elasticity, 29
Surface energy, 279
Surface functional group, 155
Surface properties, 21
Surface tension, 29, 197
Surfactant, 9
Surfactants, 55, 65

Temperature dependence of critical micelle concentration, 113
Template, 155
Thermodynamic potentials of micellization, 113
Thermodynamics, 163
Thin layer chromatography, 85
Transition temperatures, 279

Vesicles, 1
Virial equation, 163
Viscoelasticity, 203

Zeolite, 93
Zeta potential, 21
